GENERAL

animals starting with the letter x

Published: September 3, 2026 | Index ID: #-

Introduction

When you think of the alphabet and its connection to the animal kingdom, you might imagine the familiar names that start with A, B, C, and so on. However, the letter X is one of the rarest characters that appears in the common names of animals. This scarcity makes the animals that do begin with X all the more intriguing. From shimmering fish that seem to glow with translucent skin to tiny hummingbirds that flit through the mist of tropical clouds, the X animals showcase a diversity that is often overlooked.

In this article, we will explore the world of animals starting with the letter X. We'll dive into their habitats, behaviors, and the unique traits that set them apart. Whether you are a biology enthusiast, a curious traveler, or simply someone who loves fun facts about the natural world, you'll find something fascinating about these rare X creatures.

Why the Letter X Is Rare in Animal Names

The English alphabet contains 26 letters, but the distribution of those letters across animal names is far from even. The letter X, in particular, is seldom used because it is a consonant that is difficult to pronounce in many languages. Historically, many animal names are derived from Latin, Greek, or indigenous words that rarely include an X sound.

Moreover, scientific names often favor Latinized forms that end in -us, -a, or -um, rather than starting with an X. As a result, only a handful of common names—such as the X ray fish or the Xantus's hummingbird—begin with X. This rarity gives X animals a special place in the taxonomy of the animal kingdom.

Animals Starting with the Letter X

Fish
