2. Verify that the pressure regulator is set to the recommended setting for your job.
3. Ensure the nozzle is correctly attached and secured.
4. Check the fuel level and confirm that the oil gauge reads within the normal range.

Starting the Engine

Follow the steps outlined in the manual to start the GX390 safely:

1. Place the machine on a flat surface.
2. Turn the throttle to the “low” position.
3. Insert the key and turn it to the “start” position.
4. Release the choke once the engine begins to idle.
5. Allow the engine to warm up for a few minutes before operating at full pressure.

Running the Pressure Washer

The Honda GX390 is engineered for versatility. The manual explains how to adjust the **pressure regulator** and **flow rate** to match the cleaning task. For example:

- Light cleaning (e.g., patio furniture) – Use a lower pressure setting (around 2500 PSI) to avoid damage.
- Heavy-duty cleaning (e.g., concrete driveways) – Increase pressure to 3000 PSI for efficient stain removal.

Always follow the recommended pressure range for the specific nozzle type to ensure optimal performance and safety.

Shutting Down Safely

When you’re finished, turn off the machine properly:

1. Disconnect the power source (fuel, electric, or battery).
2. Turn the throttle to the “off” position.
3. Let the engine cool down before storing.

Routine Maintenance: Extending Your GX390’s Life

The manual provides a clear maintenance schedule. Adhering to it prevents costly repairs and ensures consistent performance. Below are the key tasks you’ll find in the manual, along with practical tips.

Oil and Filter Changes

Honda recommends changing the oil every **500 hours of operation**or at least once a year, whichever comes first. Use the oil grade specified in the manual (usually 10W 30). Replace the oil filter each time you change the oil.

Fuel System Care

- Use fresh, high quality gasoline.
- Check the fuel filter for clogging; replace it annually.
- Flush the fuel system if you plan to store the machine for an extended period.

Air Filter Replacement

Inspect the air filter monthly. Clean or replace it if it’s visibly dirty. A clogged filter can reduce engine performance and increase fuel consumption.

Spark Plug Maintenance

Remove the spark plug every 500 hours or if you notice a misfire. Clean the electrode gap and replace the plug if it shows signs of wear.

Coolant System (if applicable)

Some GX390 models include a liquid cooling system. Check the coolant level and top it up with the specified coolant type. Flush the system annually to prevent corrosion.

Hose and Nozzle Inspection

Inspect the hoses for cracks, bulges, or wear. Replace any damaged hoses immediately. Clean the nozzle regularly to maintain spray consistency.

Storage Tips

When storing the machine for the winter, follow the manual’s storage guidelines: drain the fuel, add a fuel stabilizer, and store in a dry, well ventilated area.
