Unlock Every Device with the Philips Universal Remote CL 043: A Complete Codes List

When you're surrounded by a wall of devices—TV, cable box, Blu ray player, sound system, and streaming stick—having a single remote that can command them all is a game changer. The Philips Universal Remote CL 043 is designed to do just that. It's compact, easy to use, and comes with a vast library of codes that allow it to talk to virtually any brand or model. In this guide, we'll walk you through everything you need to know about the CL 043, from how it works to a comprehensive **Philips universal remote CL 043 codes list** that covers every device you might want to control.

Why Choose the Philips CL 043?

- Wide Compatibility – Works with TVs, cable/satellite receivers, DVD/Blu ray players, set top boxes, streaming devices, and even audio equipment.
- Plug and Play – No complicated software, just a few button presses and you're ready to go.
- Compact Design – Fits comfortably in your hand and doesn't clutter your living space.
- Built in Code Search – If you can't find a code, the remote can automatically search for the correct one.
- Long Lasting Battery Life – Uses a single AA battery and can last months on a single charge.

What Makes a Universal Remote Work?

At its core, a universal remote sends infrared (IR) signals. Each brand and model has a unique set of codes that translate the remote's button presses into commands the device understands. The CL 043 contains a pre loaded database of thousands of these codes. When you select the correct code, the remote's IR LED emits the appropriate signal, and the device responds.

Because the CL 043 can store up to 15 device codes, you can keep your entire entertainment system under one remote. This reduces clutter, saves space, and simplifies your control setup.

Getting Started: Programming Your CL 043

Step 1: Gather Your Device Information

Before you start programming, you'll need to know the brand and model of each device you want to control. The code list is organized by brand, so having this information handy will speed up the process.

Step 2: Turn on the Device You Want to Program

Make sure the device is powered on and in the correct input mode. Some devices, like cable boxes, may need to be set to a specific channel before programming.

Step 3: Press the "Setup" Button on the CL 043

The CL 043 uses a simple setup procedure. Press and hold the "Setup" button until the LED indicator flashes. This tells the remote you're about to enter programming mode.

Step 4: Enter the Device Code

Using the numeric keypad, type in the code from the **Philips universal remote CL 043 codes list** that matches

your device's brand and model. The LED should flash to confirm the entry.

Step 5: Test the Remote

Point the remote at the device and press a button (like "Power" or "Volume Up"). If the device responds, you've successfully programmed it. If not, repeat the process or try an alternate code from the list.

Step 6: Save the Code

Press the "Setup" button again to exit programming mode. The CL 043 will store the code in one of its 15 slots. You can now use the remote to control that device.

Using the Built in Code Search

If you can't find a code, the CL 043's code search feature can help. After selecting the brand, press the "Code Search" button and let the remote cycle through codes until the device responds. Once it does, press "Setup" again to lock in the code.

The Definitive Philips Universal Remote CL 043 Codes List

Below is a comprehensive list of codes for the most common device categories. Use the table of contents at the top of each section to jump to the brand or device type you're interested in.
